## DETAILED ACTION

### *Drawings*

1. The drawings filed on 02July 2002 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

### *Double Patenting*

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 21, 31, and 45 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1, 5, and 9 of prior U.S. Patent No. 6,501,852 B1. This is a double patenting rejection.

4. Regarding claim 21 of this patent application and claim 1 of USPN 6,501,852, the claims are identical.

Regarding claim 31 of this patent application and claim 5 of USPN 6,501,852, the claims are identical.

Art Unit: 2882

Regarding claim 45, line 3, of this patent application and claim 9, line 3, of USPN 6,501,852, the only difference in the wording between these claims is the limitation of “impinging the taggant with an energy beam” in this patent application has replaced the limitation of “impinging the taggant with an x-ray” in the U.S. patent. It is inherent that the impingement of an energy beam is necessary in order to produce an x-ray that can penetrate the coating of the taggant. Thus, this claim is held to be identical.

5. Claims 22-30, 32-44, and 46 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2, 6, 10,13, 14, 17, 18, 25, 26, 29, 30, 33, 34, 37, and 38 of U.S. Patent No. 6,501,852. Although the conflicting claims are not identical, they are not patentably distinct from each other because the article in USPN 6,501,852 is a document (a paper product) and the article in this patent application is a packaging material (a solid product). It would have been one having ordinary skill in the art at the time the invention was made the taggant is applied to any suitable target material(s) as long as the taggant can adhere to the target material(s) during x-ray fluorescence analysis.
